

Can **Egypt** rely on renewable energy sources?

sunlight can power the entire world for

Egypt has the best sun radiation in the world! **Egypt's** economically viable solar potential is estimated at about **74 billion MWh per year**, or **470 times Egypt's** current electricity production!!

Wind conditions are also very favorable! Only the Western part of the Gulf of Suez holds the potential for some

20,000 MW of wind capacity.
